

FIELD GUIDE

Everything you need to run the fieldwork.

This is the tool we use to decide whether the Kenya → India service is worth building. Your job in it is simple: **log every conversation and tag what people say — the same day it happens.** The rest of this guide walks you through it.

1 Getting in

Works on your phone. No password to remember.

- 1 Open medterminal.netlify.app in your phone's browser. Add it to your home screen so it opens like an app.
- 2 Type your **team email** and tap **Send magic link**.
- 3 Open the email that arrives and tap the link. It brings you straight back, signed in — **no password**.
- 4 First time in, open **Settings** (bottom of the menu) and check your name is listed on the team, so your entries are credited to you.

The menu. Tap the ☰ icon (top-left) to open the sidebar. It follows the six phases of the project — right now we're in the **Fieldwork** stage, so those are the screens you'll live in. Later stages stay locked until we get there.

2 The one rule that matters most

● HARD RULE · NO EXCEPTIONS

Tag every interview the same day.

The moment an interview finishes, log it and add at least one quote to the **Theme matrix** before the day is out. A conversation you don't tag the same day is, in practice, a lost interview — the details fade fast.

The app watches this for you. Any interview that goes untagged past its day turns **red** across every screen. Those red warnings are the most important signal in the whole tool. If you see one, clear it — don't ignore it.

3 Your daily rhythm

- 1 **Open Overview.** It tells you where things stand and what needs you today — start here every morning.
- 2 **Before an interview,** open **Scripts** to read exactly what to ask that person's segment, and **Templates** to copy the message you're sending.
- 3 **After an interview,** log it in **Interviews**, then add the best quotes to the **Theme matrix** — same day.
- 4 **Keep Outreach current.** Move each contact along as things change, so we always know who's where.

4 The screens you'll use

Each one answers a single question.

Overview **DAILY**

"Where does the project stand, and what needs me today?"

Your morning glance — progress, and anything flagged for attention.

Outreach DAILY

"Who have we approached, and where do they stand?"

Add each contact and move them along as things change:

Cold → Sent → Replied → Booked → Done

Interviews DAILY

"Which conversations have we had — and is every one tagged?"

Log each interview. The ID and date fill in for you — just pick the segment, add a de-identified participant code, and write your notes.

Theme matrix DAILY

"What is the evidence saying, quote by quote?"

The quote bank. Paste what someone actually said, tag it with a theme, how strongly they felt it, and whether they'd pay. This is what clears the same-day red flag.

Saturation WEEKLY

"Which segments have we heard enough from — and which are thin?"

Progress bars per segment. Shows where we still need more voices.

Scripts REFERENCE

"What exactly do we ask each segment?"

Read the right script on your phone before every interview.

Templates REFERENCE

"Which message do I send this contact?"

Ready-to-send outreach messages — tap to copy.

Documents AS NEEDED

"Where is every file the field produced?"

Upload photos, PDFs, and notes from the field so nothing lives only on your phone.

Tap the assistant to open a chat panel. It knows the interviews, outreach, quotes, and the project's open questions, and it answers with specifics — real interview IDs and quotes, not generic advice. Try a quick button like **Status check** or **What now?**, or just ask it something like *"which segment are we thinnest on?"*

6 A few habits that keep us clean

- **Never use real names** for participants — use a code (like *P-04*). Same for quotes: strip anything that identifies someone.
- **Never upload consent forms or ID documents.** Keep those off the tool entirely.
- **Tag the same day.** Yes — it's worth saying twice.
- **Everything lives here.** Field notes go in the interview, files go in Documents. Don't scatter them across other apps — if it's not in the tool, the assistant can't see it and we lose it.

7 Your work is shared, live

The workspace is one shared database for the whole team. Every contact, interview, and quote you enter appears on everyone else's screen the moment they refresh — and theirs appears on yours. There is nothing to back up or send around: if it's in the tool, the team has it. One habit this enables: log things as they happen, not in batches at the end of the day.

MedTerminal · Field guide for the research coordinator. Questions about anything here — just ask in the team chat.
